

S3 Table – Results of quality appraisal

Author	Was the study question well specified?	Were quantification methods appropriate and well-executed?	Were healthcare resources valued appropriately?	Was the inclusion of intangible costs appropriate?	Was a range of estimates presented?	Was a sensitivity analysis performed?	Was uncertainty around the estimates and its implications adequately discussed?	Were important limitations discussed regarding the cost components, data, assumptions and methods?	Will the results help to understand costs of maternal morbidity?
